## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1 and 2, drawn to method to measure sensitivity by generating "translational" motion.

Group II, claim(s) 6 and 7, drawn to method to measure sensitive by generating rotational vibration.

Group III, claim(s) 3, drawn to accelerometer with a casing having perpendicular planes.

Group IV, claim(s) 13, drawn to accelerometer with diffraction grating around a rotational axis of the sensor.

Claim 12 will be examined with either III or IV.

Claims 4,5,8-11,14 and 15 are improper multiple dependent claims.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: (1) Group I is directed to testing any shaped/oriented accelerometer with "translational" motion, (2) Group II is directed to testing any shaped/oriented accelerometer with "rotational" motion, Group III is directed to an accelerometer with perpendicular planes that may be calibrated without a jig, and Group IV is directed to an rotational accelerometer that may be calibrated without a jig.
